

# Treasury Management Update

## Quarter Ended 30 June 2016

The CIPFA (Chartered Institute of Public Finance and Accountancy) Code of Practice for Treasury Management recommends that members be updated on treasury management activities regularly (TMSS, annual and midyear reports). This report, therefore, ensures this Council is implementing best practice in accordance with the Code.

### 1. Economic Background

UK GDP growth rates in 2013 of 2.2% and 2.9% in 2014 were the strongest growth rates of any G7 country. However, the 2015 growth rate finally came in at a disappointing 1.8% so this shows that growth had slowed down, though it still remained one of the leading rates among the G7 countries. Growth improved in quarter 4 of 2015 from +0.4% to 0.7% but fell back again to +0.4% (2.0% y/y) in quarter 1 of 2016. During most of 2015, the economy had faced headwinds for exporters from the appreciation during the year of sterling against the Euro, and weak growth in the EU, China and emerging markets, plus the dampening effect of the Government's continuing austerity programme and uncertainty created by the Brexit referendum. However, since the peak in November 2015, sterling has fallen against the Euro by 14% which will help to make British goods and services much more competitive and will increase the value of overseas earnings by multinational companies based in the UK. In addition, the Chancellor has announced that the target of achieving a budget surplus in 2020 will have to be eased in order to help the economy recover from the expected slowing of growth during the second half of 2016.

The Bank of England May Inflation Report included a forecast for growth for 2016 of 2.0% and 2.3% for 2017 on the assumption that the referendum result was a vote to remain. The Governor of the Bank of England, Mark Carney, warned that a vote for Brexit would be likely to cause a slowing in growth, particularly from a reduction in business investment, due to the uncertainty of whether the UK would have continuing full access, (i.e. without tariffs), to the EU single market. In his 30 June and 1 July speeches, Carney indicated that the Monetary Policy Committee (MPC), would be likely to cut Bank Rate and would consider doing further quantitative easing purchasing of gilts, in order to support growth. However, he did also warn that the Bank cannot do all the heavy lifting and suggested that the Government will need to help growth by increasing investment expenditure and possibly by using fiscal policy tools (taxation).

The May Bank of England Inflation Report forecast was notably subdued with inflation barely getting back up to the 2% target within the 2-3 year time horizon. However, the falls in the price of oil and food twelve months ago will be falling out of the calculation of CPI during 2016 and in addition, the recent 10% fall in the value of sterling is likely to result in a 3% increase in CPI over a time period of 3-4 years. There is therefore likely to be an acceleration in the pace of increase in inflation which could make life interesting for an MPC which wants to help promote growth in the economy by keeping Bank Rate low.

The American economy had a patchy 2015 – quarter 1 0.6% (annualised), 3.9% in quarter 2, 2.0% in quarter 3 and 1.4% in quarter 4, leaving growth in 2015 as a whole at 2.4%. Quarter 1 of 2016 came in at +1.1% but forward indicators are pointing towards a pickup in growth in the rest of 2016. The

Fed embarked on its long anticipated first increase in rates at its December meeting. At that point, confidence was high that there would then be four more increases to come in 2016. Since then, more downbeat news on the international scene and then the Brexit vote, has caused a re-emergence of caution over the timing and pace of further increases. It is likely there will now be only one more increase in 2016.

In the Eurozone, the ECB commenced in March 2015 its massive €1.1 trillion programme of quantitative easing to buy high credit quality government and other debt of selected EZ countries at a rate of €60bn per month; this was intended to run initially to September 2016. In response to a continuation of weak growth, at the ECB's December meeting, this programme was extended to March 2017 but was not increased in terms of the amount of monthly purchases. At its December and March meetings it progressively cut its deposit facility rate to reach -0.4% and its main refinancing rate from 0.05% to zero. At its March meeting, it also increased its monthly asset purchases to €80bn. This programme of monetary easing has had a limited positive effect in helping a recovery in consumer and business confidence and a start to some improvement in economic growth. GDP growth rose by 0.6% in quarter 1 2016 (1.7% y/y) and is expected to continue growing but at only a modest pace. The ECB is also struggling to get inflation up from near zero towards its target of 2%.

## 2. Interest Rate Forecast

The Council's treasury advisor, Capita Asset Services, has provided the following forecast:

	Sep-16	Dec-16	Mar-17	Jun-17	Sep-17	Dec-17	Mar-18	Jun-18	Sep-18	Dec-18	Mar-19	Jun-19
<b>Bank rate</b>	0.25%	0.25%	0.25%	0.25%	0.25%	0.25%	0.25%	0.50%	0.50%	0.50%	0.50%	0.50%
<b>5yr PWLB rate</b>	1.00%	1.10%	1.10%	1.10%	1.10%	1.10%	1.10%	1.20%	1.20%	1.20%	1.30%	1.30%
<b>10yr PWLB rate</b>	1.60%	1.60%	1.60%	1.70%	1.70%	1.70%	1.70%	1.80%	1.80%	1.80%	1.80%	1.90%
<b>25yr PWLB rate</b>	2.40%	2.40%	2.40%	2.50%	2.50%	2.50%	2.50%	2.50%	2.60%	2.60%	2.70%	2.70%
<b>50yr PWLB rate</b>	2.20%	2.20%	2.20%	2.30%	2.30%	2.30%	2.30%	2.40%	2.40%	2.40%	2.50%	2.50%

Capita Asset Services undertook a quarterly review of its interest rate forecasts on 4 July 2016 after letting markets settle down somewhat after the Brexit result of the referendum on 23 June. It is generally agreed that this outcome will result in a slowing in growth in the second half of 2016 at a time when the Bank of England has only limited ammunition in its armoury to promote growth by using monetary policy. We therefore expect that Bank Rate will be cut by 0.25%, probably at the 14

July MPC meeting but possibly at its quarterly Inflation Report meeting on 4 August when it has a greater opportunity to report in depth on its research and findings. Bank Rate could even be cut to 0% or 0.10% over this period. Thereafter, we do not expect the MPC to take any further action on Bank Rate in 2016 or 2017 as we expect the pace of recovery of growth to be weak during a period of great uncertainty as to the final agreement between the UK and the EU on arrangements after Brexit. However, the MPC may also consider renewing a programme of quantitative easing; the prospect of further purchases of gilts in this way has already resulted in 10 year gilt yields falling below 1% for the first time ever. We do not expect Bank Rate to start rising until quarter 2 2018 and for further increases then to be at a slower pace than before. The Governor of the Bank of England, Mark Carney, has repeatedly stated that increases in Bank Rate will be slow and gradual after they do start. The MPC is concerned about the impact of increases on many heavily indebted consumers, especially when the growth in average disposable income is still weak and for some consumers, who have had no increases in pay, could be non-existent (other than through some falls in prices).

### 3. Annual Investment Strategy

The Treasury Management Strategy Statement (TMSS) for 2016/17, which includes the Annual Investment Strategy, was approved by the Council on 02/03/2016. It sets out the Council's investment priorities as being:

- Security of capital;
- Liquidity; and
- Yield.

The Council will also aim to achieve the optimum return (yield) on its investments commensurate with proper levels of security and liquidity. In the current economic climate it is considered appropriate to keep investments short term to cover cash flow needs, but also to seek out value available in periods up to 12 months with highly credit rated financial institutions, using our suggested creditworthiness approach, including a minimum sovereign credit rating, and Credit Default Swap (CDS) overlay information.

*Officers can confirm that the approved limits within the Annual Investment Strategy were not breached during the quarter ended 30 June 2016.*

Investment rates available in the market were broadly stable during the first half of the quarter but then took a slight downward path in the second half concluding with a significant drop after the referendum on a sharp rise in expectations of an imminent cut in Bank Rate and lower for longer expectations thereafter.

The average level of funds available for investment purposes during the quarter following a review of cashflow needs was **£42m**. These funds were available on a temporary basis, and the level of funds available was mainly dependent on the timing of precept payments, receipt of grants and progress on the Capital Programme. The Council holds **£42m** core cash balances for investment purposes (i.e. funds available for more than one year), as shown on Appendix 2.

**Investment performance for quarter ended 30 June 2016**

Benchmark	Benchmark Return	Council Performance	Investment Interest Earned
7 day	0.36%	0.59% YTD	£84k YTD

As illustrated, the Council outperformed the benchmark by 23 **bps**, although this year-to-date measure will reduce by the year-end as interest rates on new and rolled over deposits come down. However, the Council's budgeted investment return for 2016/17 is **£329k**, and performance for the year to date (YTD) is in line with the budget.

## 4. New Borrowing

There has been significant volatility in PWLB rates during quarter 1 culminating in a progressive fall in rates during the first three weeks in June as confidence rose that the polls were indicating an 'IN' result for the referendum, followed by a sharp rise in the run up to the referendum day as the polls swung the other way, followed by a sharp fall to the end of the month in anticipation that there is likely to be further quantitative easing purchases of gilts in the coming months.

During the quarter ended 30 June 2016, the 50 year PWLB target (certainty) rate for new long term borrowing remained at 3%. *(However, the target rate was cut to 2.20% on 4 July 2016 due to the sharp fall in gilt yields after the referendum.)*

No borrowing was undertaken during the quarter.

### PWLB certainty rates quarter ended 30 June 2016

	1 Year	5 Year	10 Year	25 Year	50 Year
<b>Low</b>	0.89%	1.21%	1.85%	2.63%	2.33%
<b>Date</b>	27/6/16	27/6/16	27/6/16	29/6/16	30/6/16
<b>High</b>	1.20%	1.80%	2.51%	3.28%	3.08%
<b>Date</b>	27/4/16	27/4/16	27/4/16	27/4/16	27/4/16
<b>Average</b>	1.11%	1.59%	2.25%	3.05%	2.83%

### Borrowing in advance of need

This Council has not borrowed in advance of need during the quarter ended 30 June 2016.

## 5. Debt Rescheduling

No debt rescheduling was undertaken during the quarter.

## 6. Compliance with Treasury and Prudential Limits

It is a statutory duty for the Council to determine and keep under review the affordable borrowing limits. The Council's approved Treasury and Prudential Indicators (affordability limits) are included in the approved TMSS.

During the financial year to date the Council has operated within the treasury and prudential indicators set out in the Council's Treasury Management Strategy Statement and in compliance with the Council's Treasury Management Practices. The prudential and treasury Indicators are shown after point (7) below.

## 7. Other

### Treasury Management Strategy Statement

The treasury management strategy statement (TMSS) has been revised and is going to Cabinet and Council on 20th and 28th September respectively for approval – please see the separate agenda items for details.

### Changes in credit rating methodology

The recent post referendum change in the UK sovereign rating (downgraded from 'AA+' to 'AA' by Fitch) has no direct impact on the Council's ability to invest, as it has excluded the UK from its sovereign rating criteria overlay.

## Prudential and Treasury Indicators as at 30th June 2016

Treasury Indicators	2016/17 Budget £'000	Quarter 1 (Apr-Jun) Actual £'000
Authorised limit for external debt	113,500	113,500
Operational boundary for external debt	108,000	108,000
Maturity structure of fixed rate borrowing - budgeted/projected year-end position		
Under 12 months	2,154	2,154
12 months to 2 years	2,223	2,223

<b>2 years to 5 years</b>	7,104	7,104
<b>5 years to 10 years</b>	13,442	13,442
<b>10 years and above</b>	62,745	62,745

<b>Prudential Indicators</b>	<b>2016/17 Budget £'000</b>	<b>Quarter 1 (Apr-Jun) Actual £'000</b>
<b>Capital expenditure</b>	15,845	973
<b>Capital Financing Requirement (CFR)</b>	87,964	87,956

Further revisions to 16/17 capital expenditure forecasts, since the MTFP was approved, are included in the separate quarterly budget monitoring report circulated to all members, with additional explanatory comments. The low level of actual expenditure in the quarter is partly due to proposed projects still awaiting appraisal and commencement.
