1. INTRODUCTION

1.1 Winter Service - Statutory Duty

- 1.1.1 The statutory basis for Winter Service in England and Wales is Section 41(1A) of the Highways Act 1980, modified on 31st October 2003 by Section 111 of the Railways and Transport Act 2003

“(1A) In particular, a highway authority is under a duty to ensure, so far as is reasonably practicable, that safe passage along a highway is not endangered by snow or ice.

- 1.1.2 The County Council recognises that the winter service is essential in aiding the safe movement of highway users, maintaining communications, reducing delays and enabling everyday life to continue. It is very important to both road safety and the local economy. The winter service that the County Council provides is believed to be sufficient so far as is reasonably practical to discharge the duty imposed by the legislation.

- 1.1.3 The County Council, as highway authority, takes its winter service responsibilities extremely seriously. However, it is important to recognise that the council has to prioritise its response to deal with

- 1.1.4 Highways and Transportation provides the winter service through a contractual arrangement between Kent County Council and Enterprise plc.

1.2 Winter Service Standards

- 1.2.1. In order to respond as quickly and efficiently as possible to its responsibilities Highways and Transportation has adopted policies and standards for each of the winter service activities and these are detailed within this document. The operational details for the winter service activities in Kent are detailed in the Winter Service Plan 2013/14 that complements this Policy Document.

- 1.2.2 Highways and Transportation provides a winter service which, as far as reasonably possible will:

- Minimise the loss of life and injury to highway users, including pedestrians, and preventing damage to vehicles and other property
- Keep the highway free from obstruction and thereby avoiding unnecessary hindrance to passage

Winter Service Policy

(As amended September 2013)

1.3 County Council Maintained Highways

- 1.3.1 KCC Highways and Transportation delivers the winter service on Kent County Council maintained highways.

1.4 Motorways and Trunk Roads

The Department for Transport (DfT) is the highway authority for motorways and all-purpose trunk roads in Kent and the Highways Agency acts for the DfT in this respect. Responsibility for the operational maintenance of motorways and trunk roads lies with the Highways Agency. Highways and Transportation therefore has no responsibility for winter service activities on these roads. However, close liaison exists between the Highways Agency contractors over action taken during the winter service operational period within respective areas of responsibilities.

2. WINTER SERVICE OBJECTIVES

2.1 Salting

- 2.1.1
- To prevent the formation of ice on carriageways (precautionary salting)
 - To facilitate the removal of ice and snow from carriageways and footways (post salting).

2.1.2 Roads to be Included within Primary Precautionary Salting Routes

Routine precautionary salting will be carried out on pre-determined primary precautionary salting routes covering the following roads:

- Class 'A' and 'B' roads
- Other roads included in the top three tiers of the maintenance hierarchy as defined in the Kent Highway Asset Maintenance Plan. These are termed Major Strategic, Other Strategic and Locally Important roads.
- Other roads identified by Highway Managers (based on local knowledge and experience and input from relevant local stakeholders including district and parish councils), that are particularly hazardous in frosty/icy conditions

- 2.1.3 It would be impractical and financially draining to carry out precautionary salting of footways, pedestrian precincts or cycle ways

Winter Service Policy

(As amended September 2013)

and therefore no provision has been made. However, there will be a certain amount of salt overspill onto footways and cycle ways when precautionary salting is being carried out on adjacent carriageways. Post salting of footways and cycle ways will be carried out on a priority basis during severe winter weather, as resources permit.

2.1.4 Minimum Winter Network

In the event of a prolonged snow event or other circumstances leading to a shortage of resources including salt, sand and vehicles, precautionary salting will be limited to the main strategic network, i.e. all A and B roads and some other locally important roads as identified in the highway network hierarchy. Essentially, these equate to the current primary routes minus the local roads and roads that go through estates etc.

2.2 Snow Clearance

- 2.2.1
- To prevent injury or damage caused by snow
 - To remove obstructions caused by the accumulation of snow (section 150 of the Highways Act 1980)
 - To reduce delays and inconvenience caused by snow
- 2.2.2 Snow clearance on carriageways will be carried out on a priority basis as detailed in paragraph 6.2.
- 2.2.3 Snow clearance on certain minor route carriageways will be carried out by local farmers and plant operators, who are under agreement to the County Council, using agricultural snow ploughs and snow throwers/blowers. This year a small number of farmers will be equipped with spreaders to distribute dry salt after snow clearance. Snow clearance on other minor route carriageways will be carried out as resources permit. Some minor routes and cul-de-sacs will inevitably have to be left to thaw naturally.
- 2.2.4 Snow clearance on footways and cycle ways will be carried out on a priority basis as detailed in paragraph 6.3, utilising Highways and Transportation staff and district council staff where agreements exist.
- 2.2.5 Due to current budget constraints snow fencing will only be erected in exceptional circumstances and with the approval of the appropriate Highway Manager.

2.3 Roadside Salt Bins

Salt Bins are provided to give motorists and pedestrians the means of salting small areas of carriageway or footway where ice is causing difficulty on roads not covered by primary precautionary salting routes.

3. WINTER SERVICE GENERAL

3.1 Winter Service Contracts

- 3.1.1 Winter service in Kent is included within the Term Maintenance Contract awarded to Enterprise plc. This contract was awarded in 2011 and is currently in place until 2016.

3.2 Winter Service Season

- 3.2.1 In Kent the weather can be unpredictable and the occurrence and severity of winter conditions varies considerably through the season, and from year to year. To take account of all possible winter weather the County Council's Operational Winter Service Period runs from mid-October to mid-April. This year the season runs from the 18 October 2013 to the 25th to April 2014. The core winter service operates between December and February and increased salting runs are planned for this period.

3.3 Salt usage and alternatives to Salt

Rock Salt will be used as the de-icing material for precautionary and post salting. H&T uses a pre-wet system which improves the effectiveness of treatment by reducing particle distribution, increasing adherence to the surface and increasing the speed of anti-icing or de-icing action. Dry salt is also used in appropriate conditions including when there is severe snow and ice.

In cases of severe snowfall, alternatives to salt will be used including sharp sand and other forms of grit, including a salt/sand mix up to 50/50 proportion.

- 3.3.1 A number of alternative materials to salt are now available which can be used for the precautionary and post treatment of ice and snow. The cost of these is extremely high and there are also environmental disadvantages associated with most of them. Salt will therefore, for the time being, remain in use throughout Kent for the precautionary and post treatment of snow and ice.

3.4 Winter resilience standard

At the start of the winter service season H&T will have 23,000 tonnes of salt in stock in depots around the county. National guidance to local authorities suggests a resilience benchmark of 12 days/48 runs i.e. the authority would be able to continuously salt its minimum winter network during its core winter period for 12 days. The level of salt in stock ensures that this number of runs can be carried out.

4. WEATHER INFORMATION

4.1 Weather Information Systems

- 4.1.1 An effective and efficient winter service is only possible with reliable and accurate information about weather conditions, at the appropriate times in the decision making process. Highways and Transportation utilise the best weather forecast information currently available allied to the latest computer technology to ensure that decisions are based on the most accurate data available at the time. The current weather forecast provider is Meteogroup.

4.2 Weather Reports

- 4.2.1 During the operational winter service period Highways and Transportation will receive detailed daily weather forecasts and reports specifically dedicated to roads within Kent.

4.3 Winter Duty Officers

- 4.3.1 Experienced members of staff from KCC Highways and Transportation will act as Winter Duty Officers, throughout the operational winter service period, on a rota basis. The Officer on duty is responsible for the following:
- Receiving forecast information from the forecasting agency
 - Monitoring current weather conditions
 - Issuing countywide salting instructions for primary and secondary routes
 - Issuing the Kent Road Weather Forecast
 - Recording all actions taken
- 4.3.2 The Kent Road Weather Forecast will be issued daily containing information about expected weather conditions together with any salting instructions. The Winter Duty Officer will also be responsible for issuing forecast updates and any revised salting instructions when necessary. The Kent Road Weather Forecast will be sent to

KCC Highways and Transportation, contractors, neighbouring highway authorities, and other relevant agencies.

5. SALTING

5.1 Planning of Precautionary Salting Routes

- 5.1.1 Primary precautionary salting routes will be developed from those lengths of highway that qualify for treatment, whenever ice, frost or snowfall is expected. Primary routes include the roads which will be precautionary salted or cleared in most cases of wintry weather when an instruction is given by the Winter Duty Officer. Currently the primary routes comprise a third of the total length of roads in Kent which is 1597 miles, 2571 km. Each primary precautionary salting route will have a vehicle assigned which is capable of having a snow plough fixed to it, when required. In times of severe snowfall and/or extreme ice formation, dedicated vehicles will be assigned to patrol key strategic routes. Secondary precautionary salting routes will also be developed from other important highways for treatment during severe winter weather conditions. This currently equates to 15% of the total road network which is 843 miles, 1357 km.

5.2 Precautionary Salting

- 5.2.1 Precautionary salting will take place on scheduled precautionary salting routes on a pre-planned basis to help prevent formation of ice, frost, and/or the accumulation of snow on carriageway surfaces.

5.3 Post Salting

- 5.3.1 Post salting will normally take place on scheduled precautionary salting routes to treat frost, ice and snow that has already formed on carriageway or footway surfaces. Post salting may also be carried out on roads or sections of road beyond the scheduled precautionary salting routes.

5.4 Spot Salting

- 5.4.1 Spot salting will normally take place on parts or sections of scheduled precautionary salting routes either to help prevent formation of ice, frost and/or the accumulation of snow or as treatment to ice, frost and the accumulation of snow that has already formed on carriageway or footway surfaces. Spot salting may also be required on roads and footways, or sections thereof, beyond the scheduled precautionary salting routes.

5.5 Instructions for Salting of Primary Routes

Winter Service Policy

(As amended September 2013)

- 5.5.1 Instructions for precautionary salting of primary routes will be issued if road surface temperatures are expected to fall below freezing unless:
- Road surfaces are expected to be dry and frost is not expected to form on the road surface
 - Residual salt on the road surface is expected to provide adequate protection against ice or frost forming
- 5.5.2 Instructions for precautionary salting of primary routes will also be issued if snowfall is expected.
- 5.5.3 The Winter Duty Officer will issue routine instructions for precautionary salting of primary routes, for the whole of Kent, by means of the Kent Road Weather Forecast.

The Winter Duty Officer or Highway Manager may issue instructions for post salting and spot salting.

5.6 Instructions for Salting of Secondary Routes

- 5.6.1 The Winter Duty Officer will issue instructions for precautionary salting of secondary routes if prolonged heavy frost, widespread ice and low temperatures or snow, is expected.

6. SNOW CLEARANCE

6.1 Instructions for Snow Clearance

- 6.1.1 The Winter Duty Officer and/or the Highway Manager nominated representatives are responsible for issuing snow clearance instructions. Snow clearance will initially take place on scheduled primary precautionary salting routes, based on the priorities given in para. 6.2.1. Subsequently, snow clearance will take place on secondary salting routes and other roads, and footways, on a priority basis.
- 6.1.2 Snow ploughing shall not take place on carriageways where there are physical restrictions due to traffic calming measures, unless it has been deemed safe to do so following a formal risk assessment and a safe method of operation documented.
- 6.1.3 Where hard packed snow and ice have formed and cannot be removed by ploughing, a salt/sand mixture or other appropriate grit material will be used in successive treatments. This aids vehicular traction and acts to break up the snow and ice.

6.2 Snow Clearance Priorities on Carriageways

6.2.1 Snow clearance on carriageways should be based on the priorities given below:

- A229 between M20 and M2, A249 between M20 and M2, A299, A260 (Whitehorse Hill & Spitfire Way) and the B2011 (Dover Hill) (NB: continuous treatment & clearance will be carried out in the event of a snow emergency)
- Other “A” class roads;
- All other roads included within primary precautionary salting routes;
- One link to other urban centres, villages and hamlets with priority given to bus routes;
- Links to hospitals and police, fire and ambulance stations;
- Links to schools (in term time), stations, medical centres, doctor’s surgeries, old people’s homes, cemeteries, crematoria and industrial, commercial and shopping centres;
- With the approval of Highway Manager, other routes as resources permit.

6.3 Snow Clearance Priorities on Footways

6.3.1 Snow clearance on footways should be based on the priorities given below:

- One footway in and around shopping centres, and on routes to schools (in term time), stations, bus stops, hospitals, medical centres, doctor’s surgeries, old people’s homes, industrial and commercial centres and on steep gradients elsewhere;
- One footway on main arteries in residential areas and the second footway in and around local shopping centres;
- With the approval of Highway Managers, other footways, walking bus routes and cycle ways as resources permit;

- District council staff will be commissioned to clear agreed priority footways in their local areas. Arrangements are in place between the Director of Highways and Transportation and district council Chief Executive Officers.

6.4 Agricultural Snowploughs for Snow Clearance

- 6.4.1 Agreements are in place whereby snowploughs are provided and maintained by Highways and Transportation and assigned to local farmers and plant operators for snow clearance operations, generally on the more rural parts of the highway.

6.5 Snow Throwers/Blowers for Snow Clearance

- 6.5.1 KCC Highways and Transportation also has a number of snow throwers/blowers, which are allocated to operators on a similar basis to the arrangements for agricultural snowploughs.

7. SEVERE WEATHER CONDITIONS

7.1 Persistent Ice on Minor Roads

- 7.1.1 During longer periods of cold weather Highway Managers may instruct salting action to deal with persistent ice on minor roads which are not included within the precautionary salting routes and invoke arrangements with district and parish councils to take action in their local area.

7.2 Ice and Snow Emergencies

- 7.2.1 During prolonged periods of severe and persistent icing, or significant snow fall, delegated officers may declare an ice or snow emergency covering all or part of the County. In this event Highway Managers will establish a "Snow Desk" usually within the Highway Management Centre and implement a course of action to manage the situation in either of these events.

8. ROADSIDE SALT BINS

8.1 Provision of Roadside Salt Bins

- 8.1.1 Roadside salt bins can be sited at potentially hazardous locations for use by the public, to treat ice and snow on small areas of the carriageway or footway.

8.1.2 Salt bins will be filled using a mixture of sharp sand or other grit material and salt and will be refilled twice during the winter season. In the event of severe weather further refills will be carried out as time and resources permit.

8.1.3 Assessment criteria for installing a new salt bin have been devised and are shown at Appendix A. The form will be used by Highway Operations staff to assess requests from parish councils, community groups etc., A sum of money will be allocated from Highways and Transportation to provide these salt bins. All KCC salt bins are labelled.

8.2 Payment for salt bins

8.2.1 Once a salt bin has been approved by the assessment criteria, the cost of installation, filling and maintenance will be borne by Highways and Transportation.

8.2.2 Additionally one tonne bags of a salt/sand mix will be provided to parish councils who request them at the start of the winter season for use in their local area.

8.2.3 Member Highway Fund

Members are able to purchase salt bins using their Member Highway Fund in line with the usual application process.

8.2.4 Parish councils

8.2.4.1 Parish councils are permitted to purchase salt bins and place them on the highway once a suitable location has been approved by a qualified engineer from Highways and Transportation. These salt bins ideally should not be yellow and should be clearly identified by a label as being the property of the parish council. Highways and Transportation will have no obligation to fill or maintain these salt bins. However, the Highway Manager may agree to refill parish-owned salt bins upon request, subject to availability of salt and staff resources and the payment by the parish of an appropriate charge.

9. BUDGETS

9.1 Winter Service Budget

9.1.1 The budget for the annual operational winter service period is based on salting the primary precautionary salting routes on 55 occasions. The main budget is managed by the Head of Highway Operations as a countywide budget.

9.2 Ice and Snow Emergencies

Winter Service Policy

(As amended September 2013)

- 9.2.1 There is no specific budget allocation within Highways and Transportation for ice or snow emergencies. The cost of dealing with periods of icy conditions or significant snowfalls will be met by virement from other planned programmes of work on the highway or from special contingency funds for emergencies.

10. PUBLIC AND MEDIA COMMUNICATIONS

10.1 Neighbouring Authorities and other Agencies

- 10.1.1 The Kent Road Weather Forecast containing details of the winter service action for Kent will be transmitted daily to neighbouring highway authorities and other agencies so that activities can be co-ordinated regionally.

10.2 The Media

- 10.2.1 Communicating with communities, businesses and emergency services during winter is essential to delivering an effective service. Local media organisations will be informed when instructions for salting of primary precautionary salting are issued. The Kent County Council Internet site will be updated regularly and the Highway Management Centre will issue road updates.

10.3 Pre-Season Publicity

- 10.3.1 It is important that the public are aware of and understand the Highways and Transportation approach to winter service. The Kent County Council website will have practical advice and guidance including information on the location of salt bins and self-help for communities to encourage local action where appropriate.

10.4 Publicity during Ice or Snow Emergencies

- 10.4.1 Liaison with the news media, particularly local radio stations, is of the utmost importance and links will be established and maintained particularly during ice or snow emergencies.

Appendix A

SALT BIN ASSESSMENT FORM

Location of Salt Bin	Assessment Date	Assessed by

Characteristic	Severity	Standard Score	Actual Score
(i) Gradient	Greater than 1 in 15	75	
	1 in 15 to 1 in 29	40	
	Less than 1 in 30	Nil	
(ii) Severe Bend	Yes	60	
	No	Nil	
(iii) Close proximity to and falling towards	Heavy trafficked road	90	
	Moderately trafficked road	75	
	Lightly trafficked road	30	
(iv) Assessed traffic density at peak times	Moderate (traffic group 5)	40	
	Light (traffic group 6)	Nil	
(v) * Number of premises for which only access	Over 50	30	
	20 - 50	20	
	0 - 20	Nil	

(vi) Is there a substantial population of either disabled or elderly people	Yes No	20 Nil	
TOTAL			

* N.B. Any industrial or shop premises for which this is the only access is to be automatically promoted to the next higher category within characteristic (V).

Any site for which the summation of the weighing factors equals or exceeds 120 would warrant the siting of a salt bin.
